	Wood & Aluminium Venetian Blinds		
Cord-Lift WireFree™		 Cord-Lift WireFree™ RTS Motor 12 V Raise and lower Pleated/Roman Blinds	
	Pleated / Roman Blinds		

How does it work?

- **The compact size of the solar panel** ensures that it can be mounted discretely to the inner pane of the window behind the fabric of the blind.
- **The solar energy captured** by the photo voltaic cells charges a special NiMH battery.
- **This powers the Somfy WireFree™ motor** which drives the interior blind.

An efficient solution for motorised interior blinds projects

- **Suitable for all geographical areas**, even those that get little sun.
- **Works with windows facing north, south, east or west.**
- **Can be used with single or double glazed windows.**

Compatibility with the Somfy RTS control range

-  **RTS – Radio Technology Somfy®**, the secure and reliable radio control system for all your motorised blinds projects.

The WireFree™ Solar Pack includes:

A photo voltaic solar panel
complete with mounting accessories

A NiMH rechargeable battery
in a Somfy battery wand casing

A Y-connector cable
to connect the motor, battery and solar panel

Technical specifications

Battery

Nominal output	12 V
Type	Nickel Metal Hydride (NiMH)
Dimensions	Ø20mm x 321mm
Preparation	Must be fully charged prior to initial installation.

Photo voltaic solar panel

Dimensions	301mm x 41 mm
Installation	The solar panel must be mounted on the interior window pane, facing outward. Suitable for indoor use only.
